

Railway Facility Management service

Kudumbashree, the Kerala State Poverty Eradication Mission launched by the Government of Kerala, is a massive poverty eradication programme. The objective of the Mission is to reduce poverty by promoting diversified and gainful self-employment and wage employment opportunities which would lead to an appreciable increase in income on sustainable basis.

The main strategy of Kudumbashree for livelihood enhancement focus on raising the capacity of the community network to position itself as rights based organization responsible to itself and to the community it serves. Convergence plays a key role in attaining the above said objectives. One of the successful examples for such association is of Southern Railway Trivandrum Division.

Initially Railway entrusted Kudumbashree for the upkeep and maintenance of AC waiting hall and parking management in certain stations on a trial and error basis for short duration. After analyzing the passenger care and other relative aspects, Railway extended the term of service to 3 years also the number of stations assigned also increased to 40 stations. Railway entrusted Kudumbashree to manage the waiting halls of 4 major stations under Trivandrum division. Revenue sharing model is being followed for both the facility management services. 240 Women from Kudumbashree network are being selected and provided with adequate awareness on the project. Kudumbashree capacitated each member by providing training on facility management services. As this is an enterprise model the revenue share of Kudumbashree will be shared among the members in the enterprise group.

Facility Management Services offered to Metro Rail Project received universal attention and admiration; like that railway is also a wonderful example for convergence that benefits mutually.

The objectives of Kudumbashree- Facility Management Services

- Setting up of a sustainable Facility Management Service Groups to provide employment to women
- Collectivizing informal female labor engaged in various domains of service sector
- Filling the skill gaps of service groups by providing skill up gradation training according to requirements like value added services
- To develop a replicable model
